f-tronic®

f-tronic® Get electrified

Your full-range supplier in the field of electrical installation

Innovative strength, determination and quality “Made in Germany” are the cornerstones of our company.

f-tronic® has been developing, producing and marketing innovative products for electrical installation since 1990 and, as a full-range supplier, maintains close contact with the electrical trade. The company is a manufacturer of meter cabinet systems, distribution boxes, installation boxes, cable fastening and fire protection systems. Through initiatives received directly from the installer, f-tronic® manufactures high quality products with a constant focus on ease of installation and increased efficiency. The continuous expansion of our product range ensures a broad product spectrum for the electrical trade.

We stand for quality and innovative plastics processing. f-tronic® is renowned as a full-range provider in more than 25 countries - in the electrical wholesale trade, as well as for installers. With our automatic spray moulding guns that are manufactured mainly by German engineering companies, we guarantee the highest "Made in Germany" quality. Our own incentive is to develop and manufacture products that inspire when used in practice. In installation, function as well as in use. **Always in focus: An excellent price:performance ratio.**

f-tronic® always offers appropriate. We are trying to counteract the ongoing shortage of skilled workers in electrical installation by developing innovative and time-saving products. In order to bring new products to the market every year, we listen to the voices of the electrical trade and wholesalers. This gives us an extensive insight into different installation methods - at the same time providing us with important stimuli directly from practice, which we use to improve individual products and develop new ones.

The basis of our actions and activities

Solid foundation for excellent results

Made in Germany

Quality that convinces

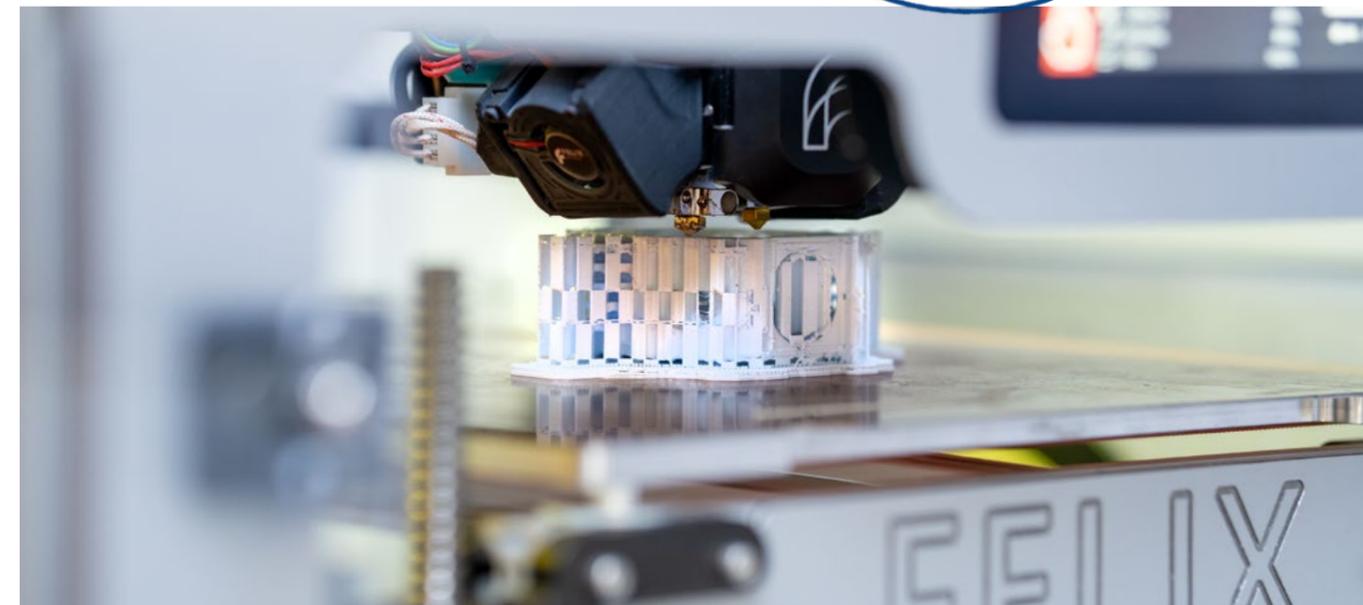

Thanks to our in-house engineering department, our quality standard "Made in Germany" is not just a promise, but a lived reality. Our professional engineers are the core of our company and embody our commitment to outstanding quality and customer-focused solutions.

Tailor-made research and development

In our highly specialised engineering department, we rely on customer-specific development to ensure that our products meet users' precise requirements. From the idea to the finished product, our experts work directly with electrical installers to create custom solutions.

Our proud tradition of manufacturing in Germany underlines not only our commitment to quality, but also to local expertise. Our products bear the "Made in Germany" seal of quality, which stands for the highest standards, precision and reliability.

Our location in Germany is more than just a geographical point – it is a promise. Here, German engineering and innovative technologies merge to create products that not only meet current market standards, but also define them.

Shaping the future together

Our engineering department is not just about products but also about partnerships. We invite you to shape the future together with us by transforming ideas into innovations and challenges into opportunities.

Discover the world of custom solutions and high-quality products – experience **f-tronic®**.

Installation boxes

Unsurpassed in diversity

f-tronic® offers a wide range of installation materials for every installation requirement. Whether flush mounted, hollow wall, timber construction, surface mounted or damp area application - we have the right product for you.

Due to a multitude of switches, sockets and intelligent, decentralised building control, a comprehensive installation range is becoming increasingly important. This trend will continue into the future.

We already have a range of up to 115 different installation boxes that are continuously tested according to current standards. We have therefore FMently completely revised our extensive range of hollow wall installation boxes.

As pioneers in the field of airtight hollow wall boxes, we are specialists in energy-efficient building installation. A complete installation with airtight boxes by f-tronic® guarantees the client a sustained increase in energy efficiency and allows comfort by avoiding drafts. Wherever you have to avoid annoying air circulation in your electrical installation, our airtight flush mounted and hollow wall socket boxes with 2K membrane technology are the first choice.

A cost-efficient installation is possible with our standard range. Rounded off by a variety of surface mounted and wet-room distribution boxes f-tronic® offers a wide range of installation boxes for different installation requirements.

Installation boxes 11

TIE-System 62

The basics for a good FM installation

- Flexibly combined with all-in distribution boxes
- 20 and 25mm tube insertion
- 4x screw boss and 2x area for spreader claw springs

1 Nail tab

Combinable with (E104) plug-nail straps. (p. 41)

2 Standard distance

In combination of multiple socket boxes, the standard spacing of 71mm is maintained.

3 Combined pipe/cable entry

High flexibility through the combination of pipe/cable entries.

Optional accessories from page 41

Installed faster thanks to the DUPLEX

- Optimally suited for opposite installation in 100 mm partition wall
- Combined with all FM socket boxes
- More wiring space
- Pipe and cable entries
- Expandable with levelling rings E130/E132
- One-man assembly

Assembly instructions

1 Pierce the wall completely with mill bit.

2 Box can be installed from one side (one-man assembly).

3 Close the box with the E120 signal cover (p. 41) and plaster it in place.

4 Wall section with inlaid box; ideal for 100mm partitions.

Versatile applications

Solid construction

- Extremely solid material, high wall thickness
- Flexible installation by variable dividers

1 Dividers

Individually removable dividers for variable separation of installation areas.

2 Standard distance

The standard distance of 71mm is automatically maintained.

3 Execution

Knock-throughs in the bridge, for the defined cable routing.

4 Marking holes

Mark the points for the milling drill holes on the basis of the marking holes.

Assembly instructions

- 1** The centering points are marked by the marking holes. .

- 2** Cut holes with milling bit.

- 3** Punch out remaining material.

- 4** Insert box in wall and protect with signal covers (p. 41).

- 5** Plaster and make good.

Flush mounted device socket, airtight

Efficiency in energy and handling

- Maximum airtightness thanks to the new f5 membrane (tear-resistant, flexible, airtight, pre-embossed, tool-free)
- Increase of energy efficiency in buildings
- More comfort by avoiding draughts
- Easy to install
- Easy to use without additional tools
- Guaranteed compliance with the standard distance

1 Airtight

The flexible membrane lies air-tight around the pipe or pipe.

2 Time-saving

Due to the flexible tear-resistant membrane, lines and pipes can be assembled quickly and without tools.

3 Combinable

All f-tronic® wall outlets can be combined. Compliance with the standard distance of 71mm is guaranteed.

4 Nail tab

Flexibility in installation with nail tab (E104) (p. 41)

5 Energy efficiency

The airtight f5 membrane avoids unwanted draughts and thus increases energy efficiency within the building. Can be used optimally in combination with the pipe plugs (p. 45).

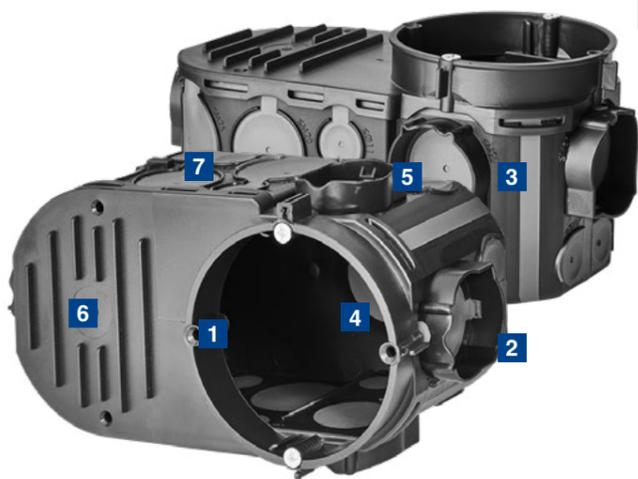

Type	E1062K	E1072K
Version	Device socket	Device connection socket
Item no.	7320026	7320028
SU / CB / PL	25 / 300 / 6,000	25 / 200 / 4,000
Depth	46 mm	65 mm
Material	PP / TPE	PP / TPE
Cable entry	-	6
Pipe entry M20 / M25	4 / 2	2 / 5

Optional accessories from page 41

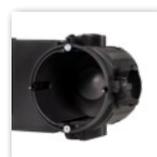

The multi-talented one

Versatile and practical

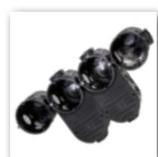

- Maximum airtightness thanks to new f5 membrane (tear-resistant, flexible, airtight, pre-embossed, tool-free)
- Sixteen flexibly assignable cable entries
- Six cable entries up to M20
- Five cable entries up to M25
- Increases energy efficiency in buildings
- Easy to install
- Divider available as accessory enables current circuit separation in the box

1 Circuit isolation

An additional partition (E551) enables simple circuit separation.

2 4-sided stackable

The E550 can be bayed on all sides. This makes installation in any type of combination possible.

3 Airtight

The f5 membrane wraps airtight around the pipe or pipe. Even under the highest mechanical stresses, the membrane holds up, preventing tearing.

4 Energy efficient

The airtight membrane avoids unwanted draughts and thus increases energy efficiency within the building. Can be used optimally in combination with the pipe plugs (p. 45).

5 Combinable

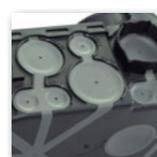

All f-tronic® wall outlets can be combined. Compliance with the standard distance of 71 mm guaranteed.

6 Plenty of space

The box offers plenty of space for the installation of components up to 50mm height or to comply with bending radii.

7 Inserts

Wide range of entries:
16x cable entries, 11x pipe entries.

Assembly instructions

1 Additional partition (E551) for circuit isolation. (p. 42)

2 Simply insert partition from above.

3 Standardised separation of the circuits.

Type	E550
Version	IT electronics box
Item no.	7320009
SU / CB / PL	10 / 80 / 1.600
Depth	67 mm
max. cross section	4 mm ²
Material	PS / PP / TPE
Cable entry ≤ Ø 11 mm	16
Pipe entry ≤ M20	6
Pipe entry ≤ M25	5
Accessories	incl. device screws

Optional accessories from page 41

The basics

for a proper hollow wall installation

- With break-outs for cables and pipes
- Integrated pipe support for NYM cables
- Secure fixing of tubes
- Combination entries up to M25

1 Standard distance

Screw spacing of 60mm ensures optimum installation of the units in the socket box.

2 Diverse insertion options

Maximum flexibility during installation thanks to the many different insertion options.

3 Easy to connect

The round connecting pieces ensure easy connection and through-wiring from socket to socket.

4 Perfect alignment

Thanks to the 3-fold screw domes, the installed device in the box can be aligned easily and simply.

Multi-hollow wall box, solid

Versatile applications

Solid installation

- Extremely solid material, high wall thickness
- Flexible installation with variable partitions
- With break-outs for easy insertion of cables
- Flame retardant to 960°C

1 Divider

Individually removable dividers for separation of circuits.

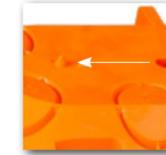

2 Grommet

Break-out cable entry for orderly cable insertion into the socket box.

3 Standard distance

The standard distance of 60mm is maintained, thanks to the design.

4 Marking pin

By pressing the socket box onto the plasterboard, marking of the outer milling holes occurs.

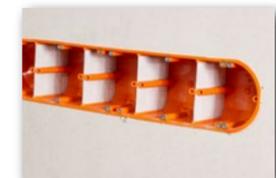

Assembly instructions

1 Mark centring points by pressing the pins.

2 With mill bit \varnothing 68mm cut, make the two outer holes and cut out the centre piece using a cutter or jigsaw.

3 Insert box and secure it with screws.

4 Socket box offers high flexibility from variable partitions and extra wiring space.

IT electronics box, hollow wall

The original

Cutting-edge IT socket boxes

- 70% time saving during assembly
- One-hole mounting
- Additional connection space for all common relays and actuators
- Problem-free compliance with the bending radius for network cabling
- Tool-free insertion from 2K membrane technology
- Displacement of insulating material during installation due to strong body

Assembly instructions

1 The cables are inserted into the socket box. The lateral compartment is suitable for all standard relays and actuators.

2 Due to the flexible membrane, the socket box is easily and conveniently inserted into the hollow wall.

3 Done. The box is installed and the bending radius of the network cable is easily maintained.

Optional accessories from page 42

Guaranteed airtight for any application

- Airtight with 2K membrane technology
- Easy to install, due to tool-free cable and pipe insertion
- Integrated pipe support for NYM cables
- Secure fixing of tubes
- Incl. airtight E105 or E105HF connection ports
- 3 variants available:
 - Device socket with cable and pipe entries
 - Device distribution box with cable and Pipe entries
 - Device distribution box for pipe installation

1 Labelling

The overleaf mounted cable and pipe insertion labelling acts through the flexible membrane component and is thus FMognisable, even after being exposed to great mechanical stress.

2 Airtight through-wiring

The connection port enables guaranteed airtight through-wiring by means of wiring connecting pieces.

4 Strengthened cable entry

The reinforced cable entry provides additional stability and simplifies the insertion of cables and wires.

3 Variable inserts

All airtight device distribution boxes have deep-FMessed pipe entries, which allow variable supply cabling with entry angles of 90° and opposite mounting in the wall.

5 Energy efficiency

The airtight membrane prevents unwanted draughts in hollow walls and thus increases energy efficiency in buildings. Optionally in combination with sealing plugs (p. 45)

Optional accessories from page 42

Pipe entry M20 / M25	2 / 2
Accessories	incl. screw lid

Hollow wall LAN socket

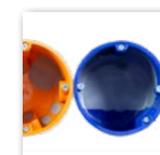

The specialist your IT applications

- Compliance with bending radii for network and data lines
- Combinable
- 3x cable entry for Simplex or Duplex
- Guaranteed airtight
- Milling hole Ø 68mm

1 Uncomplicated installation

Easy one-hole mounting in a standard milling hole diameter of Ø 68mm and 2K membrane technology.

3 combinable with 3-sides

By an offset arrangement of the fastening screws, the LAN socket can be on three sides with all hollow wall boxes, having a 71mm standard distance, combinable as desired.

2 DIN-compliant

The special design avoids bending of the pipe over the radius, which ensures lossless data transmission.

4 Airtight

Thanks to 2K-membrane technology that allows for easy insertion, the LAN socket box is guaranteed to be airtight.

HALOGEN FREE

Type	E5100	E5100HF
Version	LAN socket	LAN socket, halogen-free
Item no.	7360051	7360055

Panel thickness	5 - 25 mm	5 - 25 mm
Depth	60 mm	60 mm
Material	PP / TPE	PP / TPE
Network line cable entry	2	2
Duplex cable	1	1

Optional accessories from page 42

Relaxes and provides privacy

- Sound-absorbing function of the wall remains intact
- Subsequent installation possible
- Airtight with 2K membrane technology
- 4 cable entries
- 2x M25 pipe entries
- Installation of up to 5-fold combinations possible
- Opposing installation from 120mm wall thickness possible

1 Optimised material thickness

Optimised material thickness provides the sound insulation box with superior soundproofing properties. Nevertheless, it is designed in such a way that it complies with the interior space specified by the standard with a standard milling hole diameter of Ø 68 mm.

2 Opposing installation

From a wall thickness of 120mm, an opposed shoring without loss of acoustic insulation properties is also possible.

3 Tool-free insertion

The 2K-membrane technology of insertions is designed so that simple and tool-free insertion is possible, despite increased material thickness. The socket box is thereby not only airtight, but the sound insulation properties are maintained as well!

4 Energy efficiency

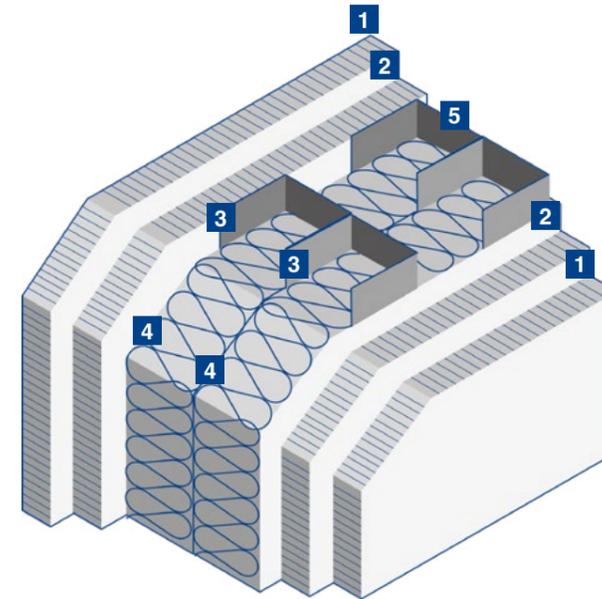

The airtight membrane prevents unwanted draughts in hollow walls and thus increases energy efficiency in buildings. Optionally in combination with sealing plugs (p. 45)

Grips tightly Stays in the wood

- Installation box with robust housing
- Fastening using TC claws, which anchor themselves in the wood
- Airtight with 2K membrane technology
- Easy to install, due to tool-free cable and pipe insertion
- Integrated cable retention for NYM cables
- Cost-effective, standard-compliant solution for solid timber, cross-laminated timber and hybrid construction
- Simple and quick assembly

1 TC fastening technology

The patented TC system anchors itself in the wood using a metal claw and is therefore stable and secure.

2 Problem with HW sockets

In solid or hybrid wood buildings where the panel thickness is more than 40 mm, conventional installation boxes for hollow wall installation cannot be installed or fastened.

3 High stability

The higher material thickness of the TC installation boxes guarantees stability and durability.

4 Tool-free insertions

Due to the 2K membrane, tool-free pipe and cable insertion is made possible, which simplifies assembly and enables a time saving of up to 60%.

5 Energy efficiency

The airtight membrane prevents unwanted draughts in hollow walls and thus increases energy efficiency in buildings. Optionally in combination with sealing plugs (p. 45).

Perfect alignment

All boxes on a single level

- Straight and pFMise
- Faster and more accurate work
- Any combination is possible
- Integrated levels for alignment
- Quick-close system

Assembly instructions

1 Drill the middle hole.

2 PFMise alignment with the integrated spirit level and fastening of the drilling template with the tensioner.

3 Then drill through the existing hole inserts.

Type	BOS2
Version	Drilling template for CW with plastic socket box
Item no.	7390048
SU / CB / PL	1 / 42 / 840
Material	PP
Diameter	Ø 68 mm

Tested to be airtight

Energy efficiency for FM & CW

- For all flexible insulating tubes
- Can be used subsequently for airtight sealing of pipes
- Simple and reliable
- Can be optimally used in combination with airtight installation boxes

Maximum wiring space

Maximum variability

- Easy to install
- With up to 22 self-sealing cut-off cable entries for cables up to 5 x 2.5 mm²
- External mounting straps with transverse and longitudinal holes for subsequent alignment

1 Mounting tab

With transverse and oblong hole for subsequent alignment and for fastening with cable ties.

2 Insertion

Flexible cable entry options to the side and on the ground.

3 Protection class IP54

The distribution box series meets the requirements of protection class IP54.

4 Stability

Stable housing and reinforced lid counteract slight twisting.

Insertion cutter

Targeted opening

Easy to use

- Defined opening of the cable entries
- Easy to use
- Ergonomic design

Application

Type	f-cutter
Version	Insertion cutter
Item no.	7390109
SU / CB / PL	10 / 200 / -
Material	PC

Easy to use

Stable design

- Easy to install
- Easy to use - no need for expensive, additional tools
- With integrated puncture membrane on all four sides
- With back membrane introduction Cables of up to 5x 25mm²
- Version with and without fixing straps

1 Mounting tab

With transverse and oblong hole for subsequent alignment and for fastening with cable ties.

2 Floor entry

Two floor entries for cables up to Ø 14 mm.

3 Internal fastening

Versatile mounting options; with screws also from the inside.

4 Tool-free and strong

Tool-free introduction and increased stability makes installation particularly convenient.

Damp area distribution box IP66

NEPTUN Compact

Small size. Great resistance.

- Robust housing in a modern design
- Screws with assembly position
- Diverse break-out entries M20-M40
- IP66 protection class with all-round seal
- Individual mounting options for perfect alignment
- Membrane entry on NFK08
- 4 different sizes
- Use in damp areas and in protected outdoor areas

1 Screw plugs with assembly position

Open the screws with a 1/4 turn. Quick disassembly and assembly guaranteed.

3 Circumferential seal

A circumferential seal enables compliance with protection class IP66.

5 External fastening

The fixing tabs are to be attached to the back of the boxes. The tabs are included in the scope of delivery for all boxes.

7 Entry M20 - M40

Pre-punched knockout openings in various sizes from M20 to M40.

2 Sealable

At the opposite corners, the damp area distribution boxes are prepared for sealing.

4 Membrane entry on NFK08

Time-saving insertion of cables and wires due to membrane entry.

6 Internal fastening

Fixing points with transverse and oblong hole for aligning the box. Insulating plugs included in the scope of delivery.

8 Flat cover

Flat cover surface for mounting additional devices such as switches or plugs.

NEPTUN Compact

Energy efficient and time-saving in processing

- Large time and cost savings
- Quick and easy installation
- No additional sealing and insulation work required
- Multiple fastening options
- Homogeneous, free of thermal bridges, compact frontage
- High individual and overall stability
- Full integration into the frontage
- No discolouration or condensation on the frontage, no mould or algae

Assembly instructions

- 1** Adjust insulation thickness. 80 - 200 mm thickness possible.

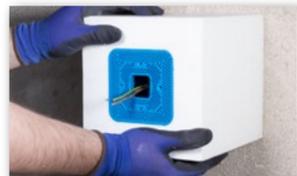

- 2** Cut pipe flush with the wall.

- 3** Apply TIE-hybrid adhesive in thin, bead form (5-6mm).

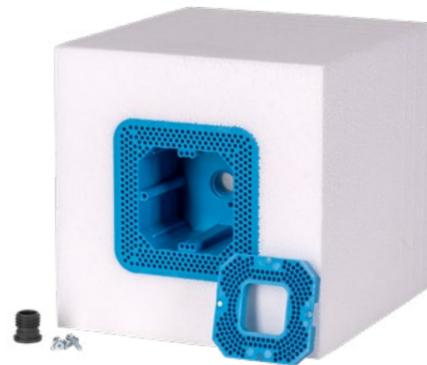

- 1** Insert line into the pre-drilled entry hole.

- 2** Press in component. Setting time after about 2 minutes.

Type	EPS20-MULTI
Version	TIE 2.0 multifunction Device socket
Item no.	7810041
SU / CB / PL	1 / 12 / 192
H x W x D	184 x 184 x 205 mm
Length	45 mm
for insulation	80-200mm
max. cross section	2.5 mm ²
Material	PU
Properties	Single device socket and Device carrier plate up to 180 NM
Pre-drilled cable bushing	Ø 10 mm
Thermal insulation capacity U (with insulation layer 200 mm)	0.17 W / (m ² · K)

- cured after only 24 hours

Type	251-KL
Version	Hybrid glue
Item no.	7810014
SU / CB / PL	1 / 20 / 360
Quantity	310ml
enough for	about 12 system elements
Setting time	1 - 2 Min.

- Alternatively, for rapid adhesive mounting, we also offer mounting brackets with nail or screw fastenings

Type	252-WK
Version	TIE-mounting bracket
Item no.	7810042
SU / CB / PL	1 / 10 / 4,000
Material	Steel
Kit Contents	2 pieces

Fire protection systems

Intelligent technology that protects

At **f-tronic®**, we guarantee effective protection with our fire protection socket boxes and ensure that the properties of the fire protection walls are maintained for up to 120 minutes. And with a remarkably simple installation, which even allows an opposing installation and retrofitting.

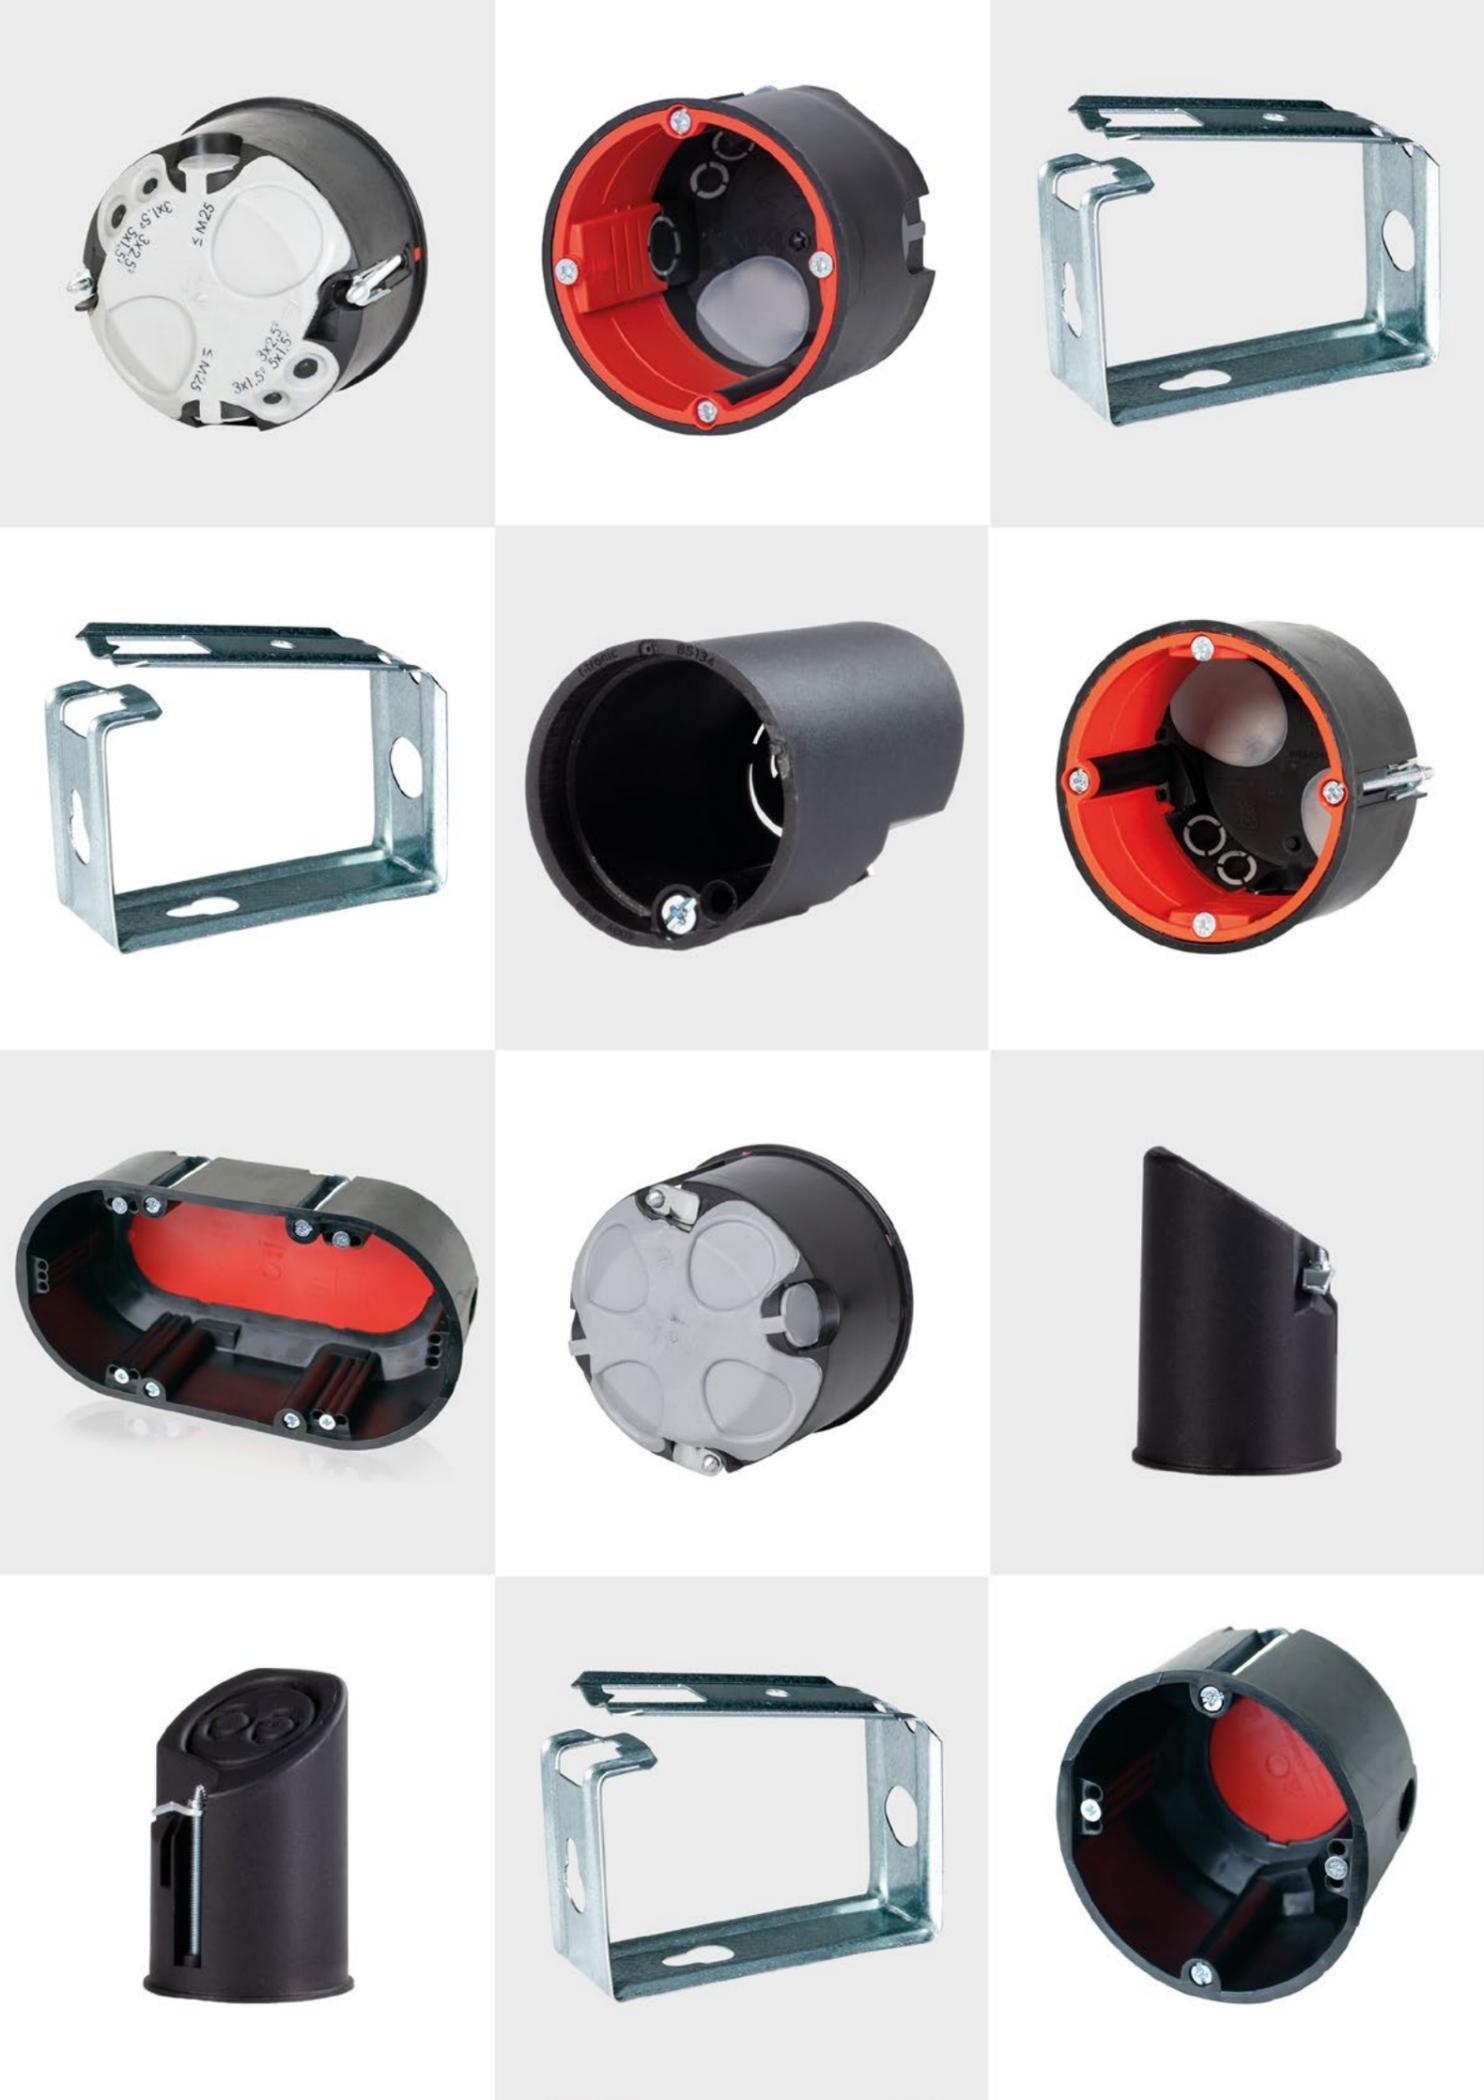

Stay safe when it matters: Our fire protection boxes range is certified Europe-wide. In this way, you not only ensure compliance with legal fire protection requirements, but also verifiable safety in rooms and escape routes, especially in the area of public facilities such as hospitals, schools and kindergartens.

To protect personal safety in case of fire, it is important that the use of escape routes and access for fire and rescue service is guaranteed for as long as possible. Our fire protection products are designed to do just that. With the first fire protection outlet box on the market, we are the first provider for outlets or entries of cables and conduits from fire protection sections.

However, when developing products, we don't just take the standard installation environments into account. We also design and test our products in timber construction and shaft walls, as well as in ceilings of fire compartments. Our internal engineering department recently developed a new installation box for fire protection, which can be installed in solid or hybrid timber buildings with a panel thickness > 40 mm using the patented TC fastening.

Meter cabinet systems

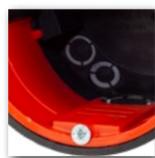

The triathlete among socket boxes

- Fire protection, sound insulation, airtight
- DIBt Z-19.21-2283
- ETA-18/0628
- Opposing installation and retrofitting possible
- tested for up to 5-fold combinations
- Lightweight wall:
 - fire resistance class EI120
 - fire resistance class EI30 to EI60 without insulating wool
- Lightweight wall with OSB and wood fibre insulation up to EI60
- Cross laminated timber wall up to EI90
- Shaft wall up to EI90

1 Labelled entries

The rear-mounted labelling allows easy and correct allocation of suitable pipe and cable entries.

2 Smoke containment

Its airtight construction, in case of fire, even before the temperature-induced activation of the intrinsic fire protection function, provides for the reliable prevention of smoke spreading inside the building.

3 Sound-insulating

Despite their compact construction, fire protection socket boxes of the latest generation from f-tronic® meet the sound insulation requirements of DIN EN ISO 10140.

4 No tools

Due to the 2K membrane, tool-free pipe and cable insertion is made possible, which simplifies assembly and enables a time saving of up to 60%.

5 Easy to install

Compliance with the standard milling hole diameter of 68mm allows quick and easy installation, as well as trouble-free stacking, without additional effort.

6 Energy efficient

The airtight membrane prevents unwanted draughts in hollow walls and thus increases energy efficiency in buildings. Optionally in combination with sealing plugs (p. 45)

Operation of the fire protection socket box

- Upon reaching the critical temperature, the socket box reacts and forms an insulating layer.
- The interior of the socket box is definitely closed from the inside to the outside.
- The socket box remains dimensionally stable in accordance with the fire resistance class.

NEU

Fire protection socket boxes

Fire resistance for timber construction

- Fire protection installation boxes for cross-laminated timber construction
- Fastening using TC claws, which anchor themselves in the wood
- Fire protection, sound insulation, airtight
- ETA-18/0628
- Safe, standard-compliant solution
- Fire resistance class up to EI90

1 TC fastening system

The patented TC system is anchored in the wood by means of a metal claw and is therefore stable and secure.

2 Problem definition of HW sockets

In solid or hybrid wooden buildings where the panel thickness is greater than 40 mm, conventional installation boxes for hollow wall installation cannot be installed or fastened.

3 Labelled entries

The rear-mounted labelling allows easy and correct allocation of suitable pipe and cable entries.

4 Smoke containment

In the event of a fire, the airtight construction reliably prevents the spread of smoke in the building before the actual fire protection function is triggered due to temperature.

5 Tool-free entries

Due to the 2K membrane, tool-free pipe and cable insertion is made possible, which simplifies assembly and enables a time saving of up to 60%.

6 Energy efficiency

The airtight membrane prevents unwanted draughts in hollow walls and thus increases energy efficiency in buildings. Optionally in combination with sealing plugs (p. 45)

The missing brick for perfect protection
Our fire protection socket box for ceiling and wall outlet for cables and lines. More information on the following page.

The missing brick for perfect protection

- Unique, new technology for compliance with VDE for cable outlets in fire protection walls
- Also approved for penetrations
- For 2 cables or one M25 electrical installation pipe
- Easy installation as usual
- Fast, simple and secure
- ETA approval up to EI90
- Approved for ceilings up to EI90

1 Cable entry

Time-saving entry for 2 cables.

2 Conduit entry

Unique M25 conduit entry in fire protection outlet box.

Type	BS134
Version	Outlet box
Item no.	7500057

Panel thickness	5 - 30 mm
max. cross section	2.5 mm ²
Accessories	incl. cover

Safety divider Uncomplicated application

- Partitioning of feedthroughs of cables and cable bundles
- Application in solid walls, solid ceilings and lightweight partition walls
- Note ETA-16/0318 approval
- Cartridges usable with standard press guns
- Resistant to aging, water-based
- Easy processing, even with small ring joints
- Can be used in areas with a high humidity rating

Type	BSDSB

Works even when things get hot

- General building inspection certificate ("abP")
- Integrity E30 - E90
- Easy snap-on
- No fire load
- Halogen-free

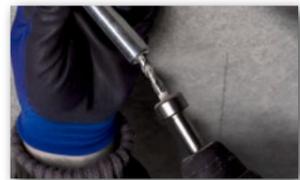

Application

1 Pre-drill a defined hole with a stop drill.

2 The stop defines the optimum depth of the drill hole.

3 Place the setting tool on the drill and set to hammer.

4 Drive in the dowel in one step using the hammer function and thus fasten the multi bracket.

5 After fastening, the multi bracket can be directly equipped with cables and wires.

6 The simple snap closure guarantees a secure hold and allows for easy re-assignment and installation.

Material	Steel	Steel

Quickly secured

Hard to take out of the mounting

Installers can now dispense with tools. Because the **f-tronic®** Cable Management System products (CMS) are simply affixed by hand. How is that possible?

Thanks to an easy assembly system that needs nothing else but a Ø 6mm hole and the same for all fastening systems. Whether surface or flush mounted, for maximum flexibility.

The installation aids f-fix and f-clip also make daily practice easier when laying cables and installing flush mounted and hollow wall boxes. This saves time and money during assembly.

We also offer systems with functional integrity; these materials round off the complete range.

Fastening systems 77

Cable Management System 78

Installation aids 83

Fastening system with functional endurance 86

CMS

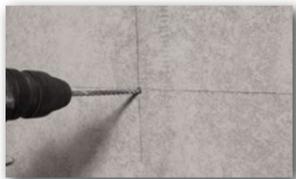

Quick and easy to connect

- Savings in working time and costs from quick and easy installation
- Secure hold, thanks to pull-out forces up to 40kg
- Halogen-free
- Working temperature range -20°C - + 84°C
- Glow-wire tested up to 750°C
- All products each in own resealable bag
- For all products, a drill diameter of 6mm diameter is required

Double plug-in anchors

Assembly instructions

1 Drilled hole Ø 6 mm.

2 The product is inserted without any additional tools.

3 Simple and quick installation, secure hold.

Application

Fixing clip

f-clip

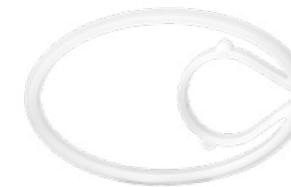

Quick and tool-free cable attachment

- Quick and tool-free fixing in masonry slots up to 55mm
- High clamping force
- No showing through the plaster thanks to colour neutrality
- No damage to the cables possible
- Easy installation due to practical finger loop
- Reduced installation time - 50% faster!

Assembly instructions

- 1 The f-clip fixes cables and pipes simply and without tools in masonry slots up to 55 mm wide. It can be used in two different positions.

Type	f-clip

f-fix

Put an end to cable searches

- For cable fixing in HW socket box installations
- No unnecessary holes
- No fishing out of the cable
- No complex cable search
- No cable damage
- Valuable time saved

Assembly instructions

1 Drill a Ø 10mm hole.

2 Screw in f-fix .

3 Fix cable with cable tie to f-fix.

4 Drill Ø 5mm diameter hole: The drill is guided through the f-fix and drilled through the opposite side of the wall.

5 Drill into preset hole on opposite side with centering drill of milling crown; counter-sink box hole.

6 Find cable.

Type	f-fix set	f-fix drills
Version	Set 50x f-fix + 1x drill	Drill 5x 200mm for f-fix
Item no.	7390115	7390118
SU/CB/PL	1 / 30 / -	10 / - / -

Works even when things get hot

- General building inspection certificate ("abP")
- Integrity E30 - E90
- Easy snap-on
- No fire load
- Halogen-free

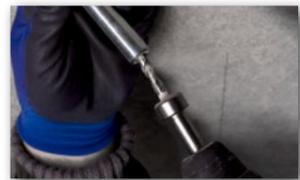

Application

1 Pre-drill a defined hole with a stop drill.

2 The stop defines the optimum depth of the drill hole.

3 Place the setting tool on the drill and set to hammer.

4 Drive in the dowel in one step using the hammer function and thus fasten the multi bracket.

5 After fastening, the multi bracket can be directly equipped with cables and wires.

6 The simple snap closure guarantees a secure hold and allows for easy reassignment and installation.

Distribution boards

The right distributor for every application

f-tronic® small distributors are hard to beat in their diversity. Whether flush, hollow-wall, surface, communications or damp area Distributors - f-tronic® has it all!

With our JUMBO flush and hollow wall distributors, we offer a solution for every application. At f-tronic® our range includes 1- to 5-row circuit distributors with plug-in and screw connectors. These distributors can of course also be combined with the identically constructed communications distributors. For easy and convenient combination, we offer a unique distribution connector set. All communication distributors can also be equipped with a WiFi port. Should there be no room for two separate distributors, the twin distributor series is the right solution for you. This clever and space-saving combination, consisting of a circuit and communication distributor, offers you a lot of room in a tight space.

Our VISION series is the right solution for surface distribution. Here we offer 1 to 4 row circuit distributors and the matching communication distributors. We have updated the VISION distributors, so they now offer even more assembly convenience and more diverse installation options. For example, with more wiring space, more diverse entry options and simpler labelling.

The f-tronic® surface mounted damp area distributor series NEPTUN can be used for damp area or outdoor installations. The NEPTUN is available in 4 sizes and 2 different materials. We also offer practical accessories such as an IP65 connector.

If more space is required, we have surface mounted field distributors and distribution cabinets with up to 540 division units in the range.

Our time-saving solution for your project: Our pre-wired distributors. We also offer all distributor variants ready for connection. Our team of experts will work with you to plan and design the ideal solution individually for your project.

Flexible usage

Flush mounted and in hollow walls

- Generous wiring space
- Strain relief possible
- Frame structure 9mm
- Packaging can be used as plaster protection
- Suitable with HWA-Set for hollow wall installation (p. 117)

1 Well-ventilated
Integrated air vents provide for heat dissipation.

3 Optimum alignment
Simple and easy installation, thanks to the integrated spirit level.

5 Secures
3 + 4 rows standard prepared for three FI circuits.

2 Spacious
Easy installation, due to a lot of space in the upper and lower connection areas.

4 Additional space
12 + 2 TE per row. Simply break out the cover to use the additional 2 TE per row.

6 Holds firm
Hollow wall anchor suitable for panel thickness 8 - 40 mm.

Pre-assembly possible using System

- Optionally, can be used for flush or hollow wall mounting
- Support frame for easy pre-assembly of devices and equipment
- Generous wiring space
- Strain relief possible
- Packaging can be used as plaster protection
- Suitable with HWA-Set for hollow wall installation (p. 117)

Assembly instructions

1 Pre-assemble
Install the distribution tray and fix it in the hollow wall or masonry, lay pipes and lines.

2 Pre-install
The wired support frame can then be installed as one part in the distribution board.

3 Finishing
Connecting the pre-wired machines, assemble the frame and door, done.

Double Power in distribution

- Optionally, can be used for flush or hollow wall mounting
- Support frame for easy pre-assembly of devices and equipment
- Generous wiring space
- Strain relief possible
- Packaging can be used as plaster protection
- Suitable with HWA-Set for hollow wall installation (p. 117)

1 Power supply

Socket at the bottom of the circuit portion allows direct power supply of communication devices.

2 Insulated separation

Separator between the two sections ensures compliance with the protection class.

Innovative solutions for communications distribution

- For hollow wall and flush installation
- For installation of multimedia applications (e.g. : Telecommunications and broadband cable distributions)
- Convenient access to hardware components (e.g. : modem, wireless router, switch)
- Standard 3-way socket with staggered slots
- Ventilation slots in the door for heat dissipation

1 Power supply

The hardware components are mounted potential-free on the plastic support plates and supplied with mains voltage via the triple socket.

2 Convertible

The socket can be converted to Euro plugs using the inserts supplied.

3 Ordered

The patch panel integrated in the top area, allowing easy mounting of patch modules in the "Keystone" format. (e.g. RJ-45, p. 119)

4 Optimum alignment

The integral spirit levels allow for quick and accurate alignment of the distributor.

Modern technology

Made for the future

- Uncomplicated distribution on walls
- For simple wall surface mounting
- Supplied with plug-in or screw terminals
- 1 to 4 row versions available

1 Perfect hold
Strain relief for imported lines above and below.

3 Entry options
Rear cable entry options in the upper, middle and lower connection area.

5 Secures
3 + 4 rows standard prepared for three FI circuits.

2 Spacious
Easy installation, due to a lot of space in the upper and lower connection areas.

4 Additional space
12 + 2 TE per row. Simply break out the cover to use the additional 2 TE per row.

6 Easy wiring
Cable feedthroughs on the side and under the top-hat rails simplify wiring within the distributor.

VISION K

for a future-oriented technology

- For installation of multimedia applications (e.g. : telecommunications and broadband cable distributions)
- 3- and 4-row version for surface installations
- Integrated patch panel for mounting patch modules
- Plastic carrier plate for hardware components (e.g. : modem, WiFi router, switch)
- 3-outlet socket
- Door with ventilation slots
- Meets all the requirements of DIN 18015-1 to DIN18015-4

1 Power supply

The hardware components are mounted potential-free on the plastic support plates and supplied with mains voltage via the 3x socket.

2 Convertible

The socket can be converted to Euro plugs using the inserts supplied.

3 Ordered

The patch panel integrated in the top area, allowing easy mounting of patch modules in the "Keystone" format.

NEPTUN

Seeks the challenge.
Masters every situation.

- Protects equipment from harmful ingress of water and dust - IP65
- Tool-free cable entry due to IP65 membrane entry flange
- Reduced condensation due to integrated ventilation system
- Tool-less adjustable top-hat rail due to click system
- Robust housing for harsh conditions
- 1- to 4-row versions
- For high requirements SQ variant

Installation boxes

Fire protection systems

Fastening systems

Distribution boards

Meter cabinet systems

1 DIN-rail rail adjustment

Tool-free click system for adjusting the top-hat rails on 2 levels. Can be quickly and easily moved from the standard installation height of 50 mm to 62 mm installation height.

2 Cable cover

Has knock-out openings at the top and bottom for cable covers M32/M50 and at the side for M20/M25.

3 Entry flange MKF4/26

The IP65 membrane entry flange, ensures a tool-free cable entry. This means no additional components such as cable covers are required to comply with the IP65 protection class.

4 AMS ventilation system

The f-tronic® Air Membrane system with a breathable membrane ensures circulation of the ambient air and balances the temperature in the distributor. This system reduces the formation of harmful condensation.

5 Cable cover

The cable cover supplied as standard protects your installation from damage and dirt.

6 Attachment

The fastening system saves time and hassle. The NEPTUN is equipped with elements such as an integrated spirit level and markings on the reverse side of the internal fastening points incl. dimensioning.

NEPTUN

Seeks the challenge.
Masters every situation.

NEPTUN SQ

Solid Quality
For particularly high requirements

The solid-quality variant of the NEPTUN family of damp area distributors is particularly resistant and designed for high requirements. SQ stands for Solid Quality, which for us means: A maximum of strength and durability. The SQ series is made of high-quality polycarbonate and therefore can be used in installation environments that are particularly demanding.

The little ones are big

Equipped small distribution boards for your project

- Saves valuable working time on the construction site
- Designed to deal with the shortage of skilled workers
- Systems are tested in advance
- Documentation and circuit diagrams available
- Delivered ready for connection
- Possible with our HW/UP combination, hollow wall, flush mounted and surface mounted small distribution boards
- Expansion with high-quality brand components

Optimised process

The 2-step delivery form

- Delivery of the distribution components in two steps
- First the wall boxes and then the interior/supporting structure with door and frame are delivered
- Protects the installer from theft of the expensive components in the interior, as the interior is only installed shortly before connection
- Material is delivered at the optimum time for assembly
- No unnecessary storage at the installer

Distributor connector

A reliable connection

- Extremely stable
- Quick and easy installation
- Saves time and money
- End rail for a clean finish
- Suitable for hollow wall and flush mounting
- Ideal for combining electrical circuits and communication distributors

Assembly instructions

1 Break out the screw points on the outside of the distributors.

2 From behind, place the connecting pieces between the distributors in the guide rails.

3 Screw the inserted connectors together from the front.

4 Pre-mount one hollow wall anchor on each of the two connectors.

5 Pre-mount two hollow wall anchors on the outside of each distributor.

6 Insert the connected distributors as one unit into the wall, tighten the hollow wall anchor and click the end rail onto the gap from the front.

suitable for	NEPTUN	NEPTUN

NEPTUN connector

IP 65

Connects NEPTUNs for unlimited installation space

- Provides enough space for any kind of through-wiring
- For more than 4 rows 48 HP wiring space
- High flexibility for installation in protected outdoor areas
- Arbitrary and infinitely combinable
- IP65 protection class is maintained

Assembly instructions

1 Click out the entry flange of the NEPTUN damp area distributor.

2 Remove flange.

3 Insert the NEPTUN connector into the opening using the click system.

4 Finished!

Perfect in combination: NEPTUN Compact damp area distribution boxes and NEPTUN damp area distributors

More information on the NEPTUN Compact distribution boxes can be found from page 53 onwards.

Large distributors for intelligent installation technology

- Generous cable entries at the bottom, top and back of each field width
- Upper and lower cable entry with membrane puncture, allowing quick and easy handling without additional tools
- All covers with lateral bulkheads
- From three field widths with double door
- Various lock variants are possible - even DIN cylinder lock
- Incl. 1x ZSSKN17N and 1x ZSSKPE34 plug-in terminal per field

*Note door distance to REG. No modular devices may be mounted behind the handle.

Lots of space for maximum distribution

- Housing in an appealing design of 1mm thickness, powder coated steel plate
- Unique, push-out fastening system, thus rapid and flexible wall mounting
- Door can be removed without tools and can be affixed to the left or right
- Large door opening angle
- Includes cover strips and PE-N plug-in connectors in scope of delivery
- Retractable mounting rails
- Large wiring space behind the top hat rails
- Cabinet depth incl. mounting straps 210mm
- Incl. 1x ZSSKN17N and 1x ZSSKPE34 plug-in terminal per field

Space for more distribution

Project-specific and customised

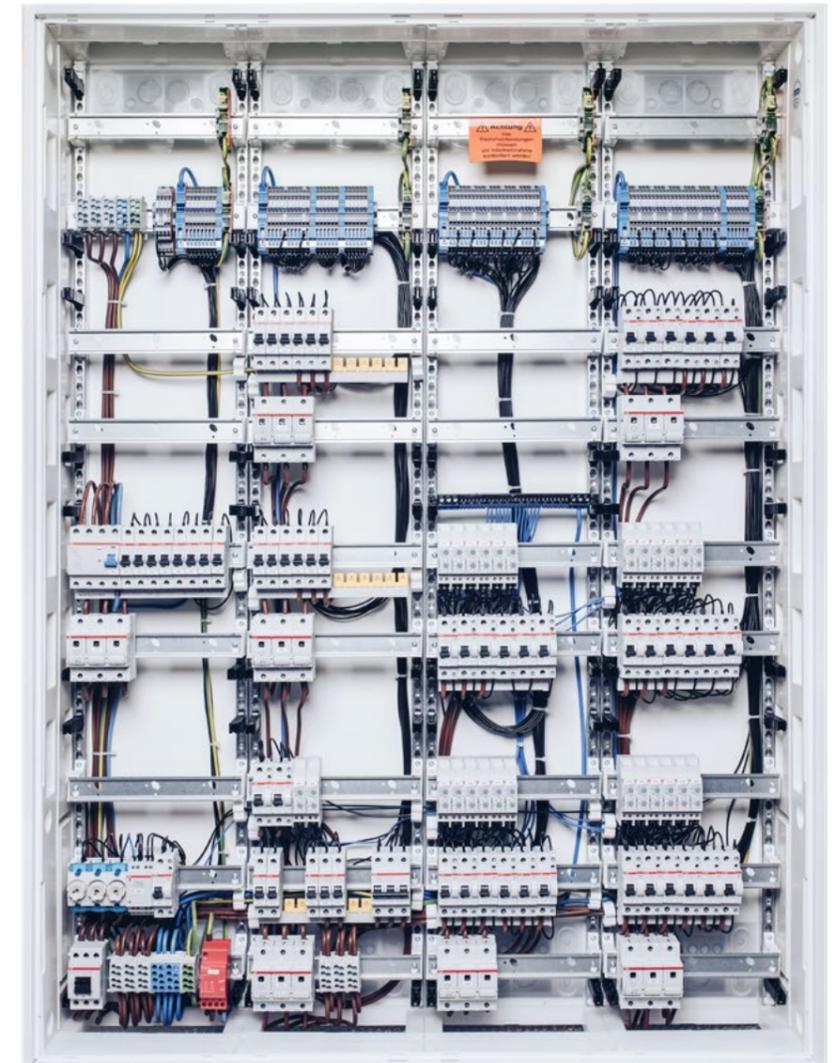

- Individually planned, constructed or pre-wired field distributors
- With selected components for your application
- Ideal for intelligent installation technology in large projects
- Saves time and money
- Up to 4-row and 3- to 6-row version
- 165 mm housing depth
- Generous cable entries on the bottom, top and rear sides
- Piercing membrane at the upper and lower cable inlet
- Quick and easy handling without additional tools
- Available as FV media distributors with communication fields

Customised and spacious

Even more space in distribution

- Distribution cabinets planned, removed or pre-wired according to your requirements
- With selected components for your large-scale project
- Ideal for intelligent installation technology
- Up to 5-row and 6- to 9-row version
- 210 mm housing depth
- Attractive design made of 1 mm thick, powder-coated sheet steel
- Unique slide-out mounting system that allows for quick and flexible wall mounting
- Available as VS media distributor with several communication fields

Meter cabinet systems

Progress, that counts.

With the **f-tronic®** Meter cabinet systems, we are completely focussed on the needs of our customers - the building contractors and installers. With our components and complete cabinets, we offer customers customised solutions that are easy to use. Our Meter cabinet systems cover the entire spectrum of energy distribution, from meter cabinets and transformer cabinets to advanced meter connection columns.

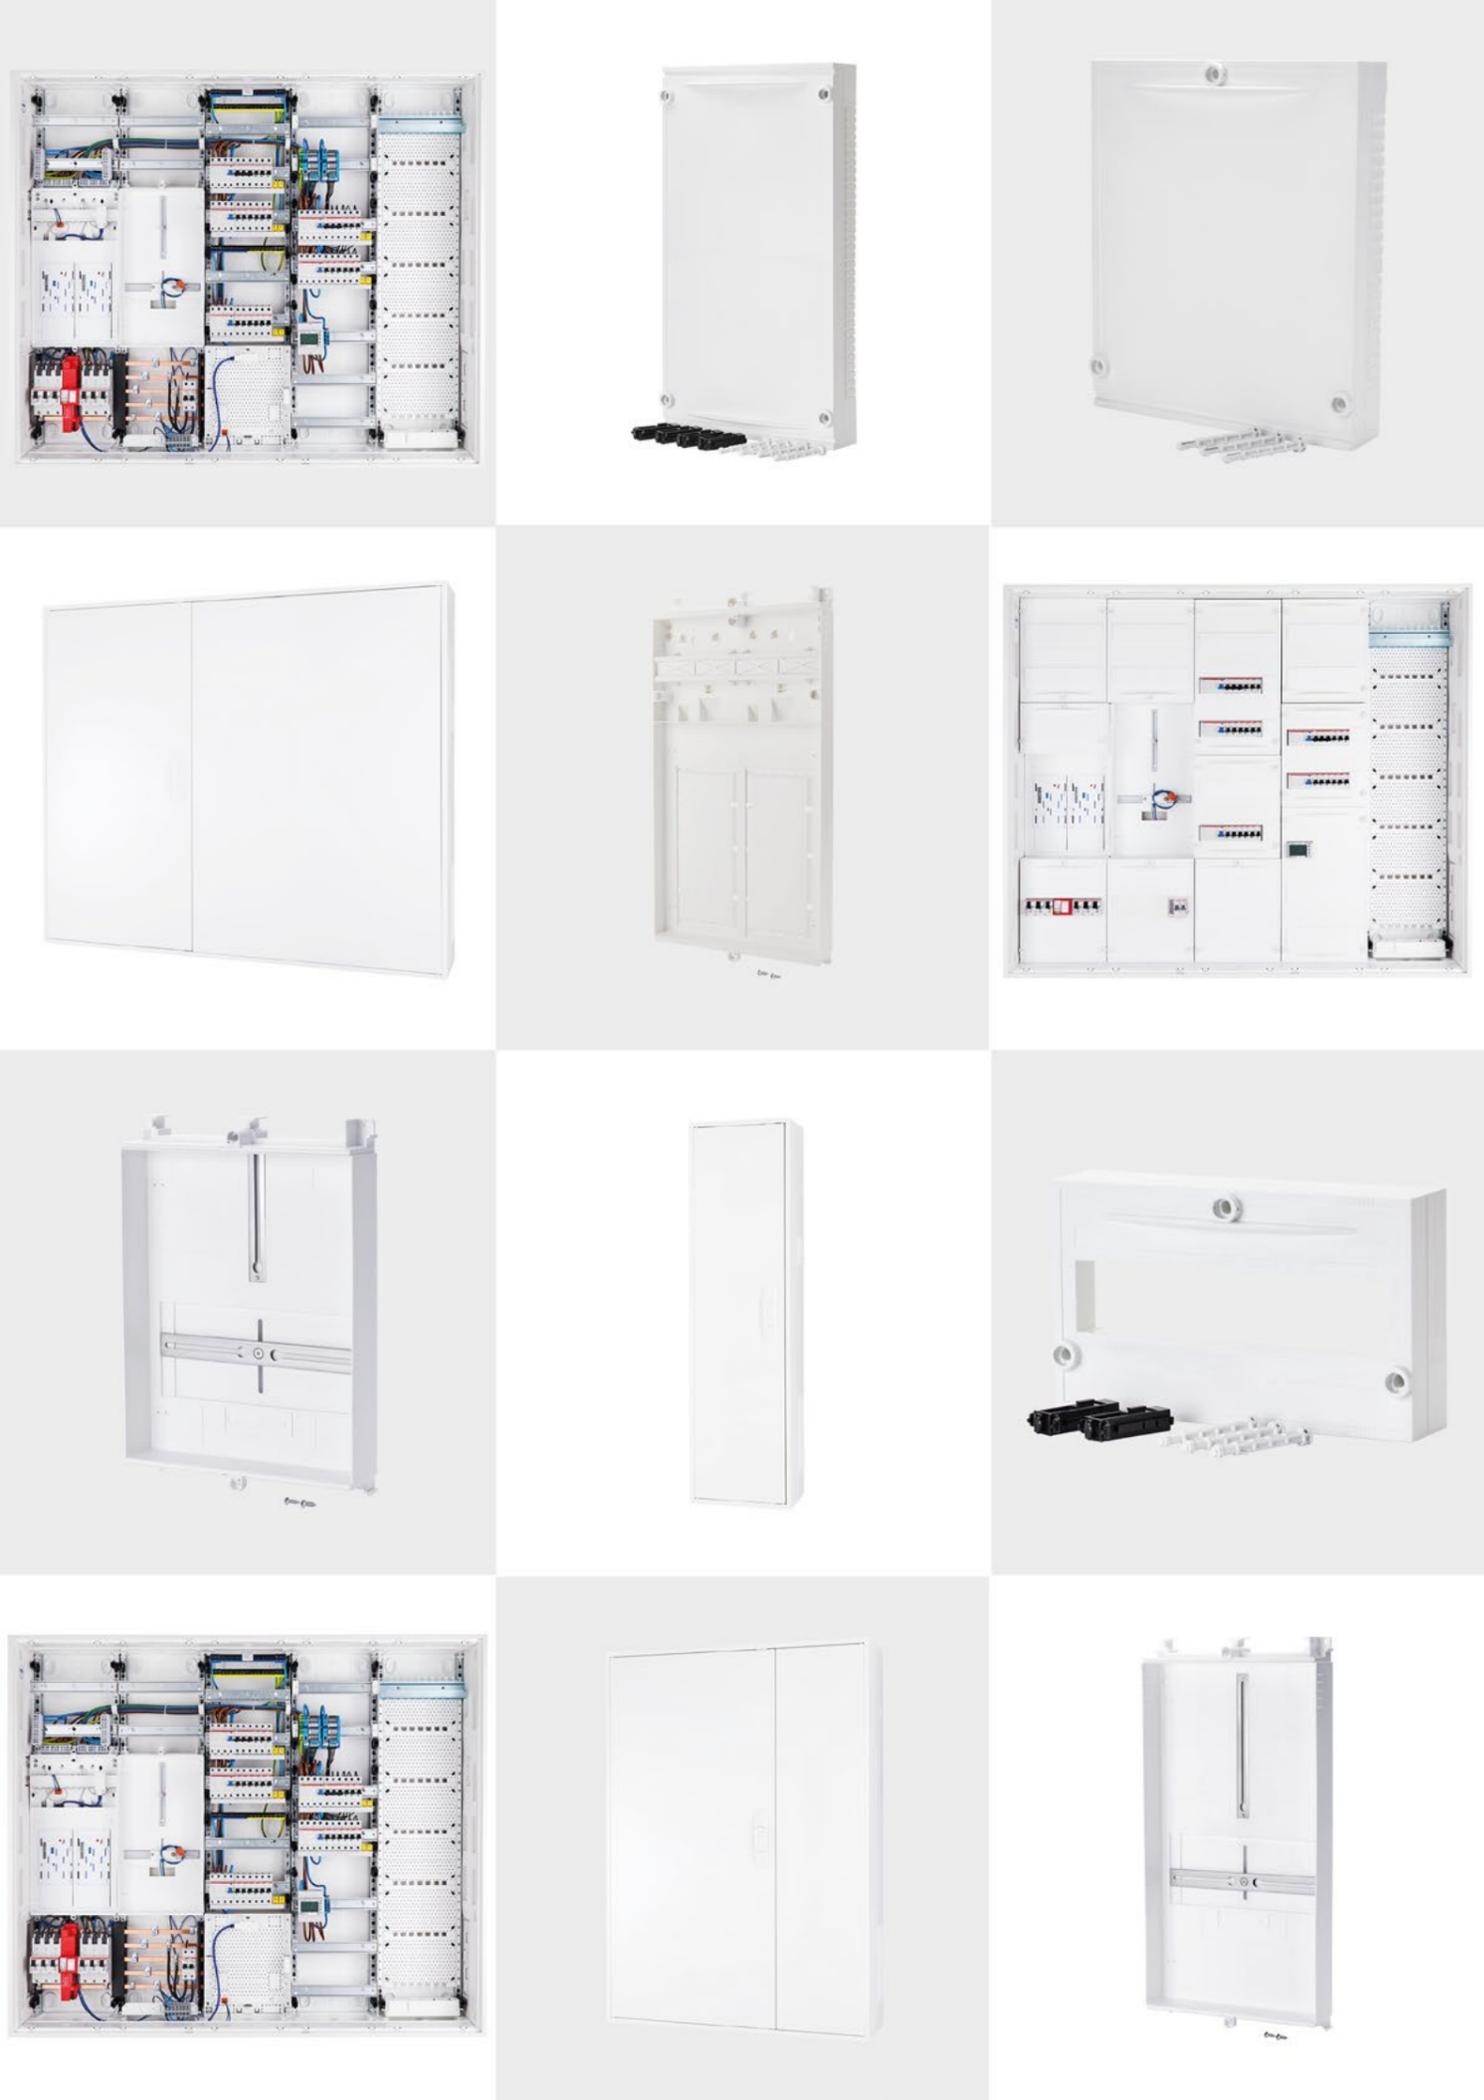

In these fast-moving times, where technological advances set the pace, adaptability is key. At **f-tronic®** we recognise the need to stay in tune with technological change. As a result, we have overhauled and completely renewed our entire range of meter cabinets: it's time for the next generation.

The Power Series

Versatile, convenient, time-saving - that's the Power Series, combining the technologies of today with those of the future and thus safeguarding installers and customers alike. Our new meter cabinet product series sets standards, as it takes into account not only the current but also the future requirements of energy distribution. Through continuous further development, we have created a system that not only fulfils today's standards, but is also equipped for the dynamic developments and innovations of the future. This makes it easy to switch over by installing heat pumps, photovoltaic systems and wall boxes.

Experience a new level of convenience. The new meter cabinets have been designed with user-friendliness in mind, from the intuitive arrangement of components to innovative functions that simplify and optimise the installation process.

Experience the future of energy distribution with **f-tronic®**.

Our experienced project team

We're at your side

Our meter cabinet project team consists of a large number of qualified, competent electricians. This means you receive the best advice - straight from the professionals. The team's high level of expertise guarantees personal, professional and optimal advice when planning your project.

You can find the contact details of our project team on page 163.

Many possibilities

Customised delivery forms for your project

We offer our **f-tronic®** Meter cabinet systems in various delivery forms. This means that we offer you not only one product, but a flexible system. Customise the meter cabinet to the specific requirements of your project and benefit from a wide range of options that offer you maximum flexibility.

ZS 2.0

The component / assembly delivery form

Put together your own customised meter cabinet. With our ZS 2.0 system, installers can configure their system as required, as the individual components of the system are kept in stock by wholesalers. As an ideal aid, the cabinets can be customised to your project using our own meter cabinet configurator on our website. The required meter, distribution and communication fields are then put together online and can be easily ordered later from the wholesaler's warehouse - completely flexible and without delivery times!

Equipped cabinets

One cabinet, one package

The ideal solution for efficient deliveries, optimised workflows and time-saving installation: our equipped cabinets. The Meter cabinet systems are pre-assembled in our factory for immediate use, saving you valuable time on site. This allows you to concentrate on the essential installation steps and speed up initial operation. Not only do we have a space-saving and resource-saving packaging concept, but it also enables efficient storage, reduced susceptibility to errors during assembly and more effective utilisation of working time. You can obtain both predefined cabinet systems for standard cases and flexibly configurable cabinets for your project from us.

Carefree all around

The all-in-one solution

Benefit from our comprehensive planning and complete wiring for your meter cabinet system. With our all-round carefree option, our experienced project team plans your metering system with complete wiring and documentation. All we need from you is all the relevant information, including the installation location of the system, the number of meter spaces required, wiring diagrams, etc. - the metering system is then delivered to your project fully wired and labelled by **f-tronic®**. You install the installation as a complete system and can put it into operation straight away. This saves you valuable time during planning, documentation and installation.

Flexible and independent Assemblies for self-assembly

- Meter, distribution and communication fields in the storage system
- Can be stocked by wholesalers, flexible use for installers
- High-quality processed empty housing made of robust sheet steel
- Installation heights 1100 mm and 1400 mm
- Up to 5-field with protection class IP31/43 or IP54
- Meter fields eHZ and 3.HZ
- Distribution, communication, combination, tariff and reserve fields
- Panels can be easily fixed in the housing with a 1/4 turn quick-release fastener

Fast and secure Your planning aid

- Online configurator for simple, uncomplicated meter cabinet configuration
- Optimal for use with our meter cabinet 2.0 system
- Simple and uncomplicated procedure
- Location and time-independent through online availability
- Simple assembly of required modules by the installer or wholesaler
- Direct extraction of a list of the desired components for quick quotation generation
- High level of safety for the installer by maintaining the current technical connection conditions (TAB) of the individual energy supply companies (EVU) in Germany
- No more need to deal with the TAB of the individual EVUa
- Configurator automatically selects the right equipment
- Planning and ordering significantly accelerated by secure and convenient software solution

Complete meter cabinets

One cabinet, one package

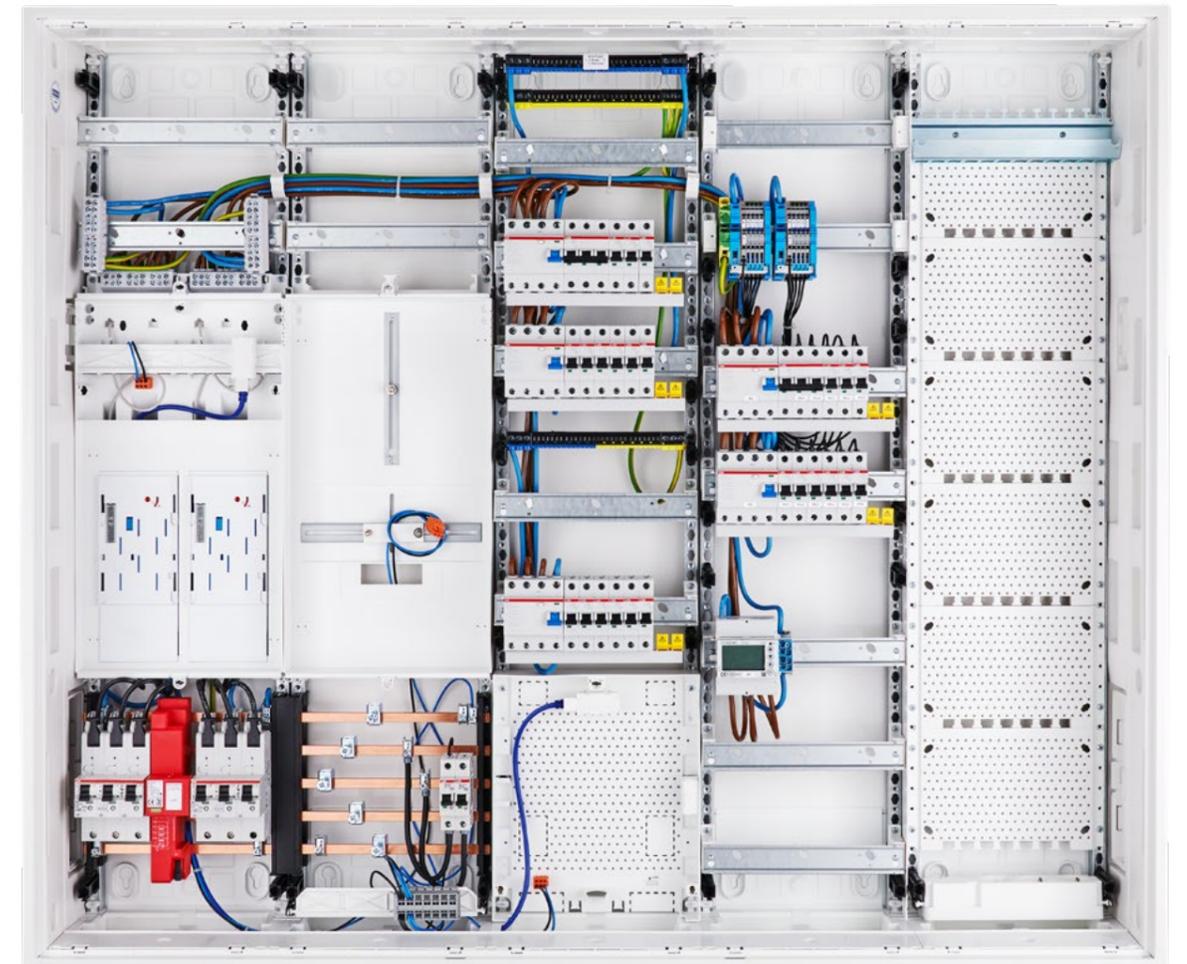

- Standardised complete meter cabinets
- Sturdy sheet steel housing and modular installation systems
- Optimum solution for many standard applications
- Installed heights 1100 mm and 1400 mm available
- 1- to 5-field with protection class IP31/43 or IP54
- For 1 to 3 meter positions
- Versatile meter fields as eHZ and 3.HZ version
- Housing with membrane insertion flange, through-wiring option and wall compensation screw
- System for concealed internal and external fastening
- Cable routing system for all fields, for clean cable routing in the meter and distribution field as well as in the communication area
- Meter cabinets with meter panel and distribution panel up to pre-mounted SLS switch, overvoltage protection and fuse package
- Time and resource saving

Installation-ready metering systems

All-round carefree solution with DIN rail mounted devices

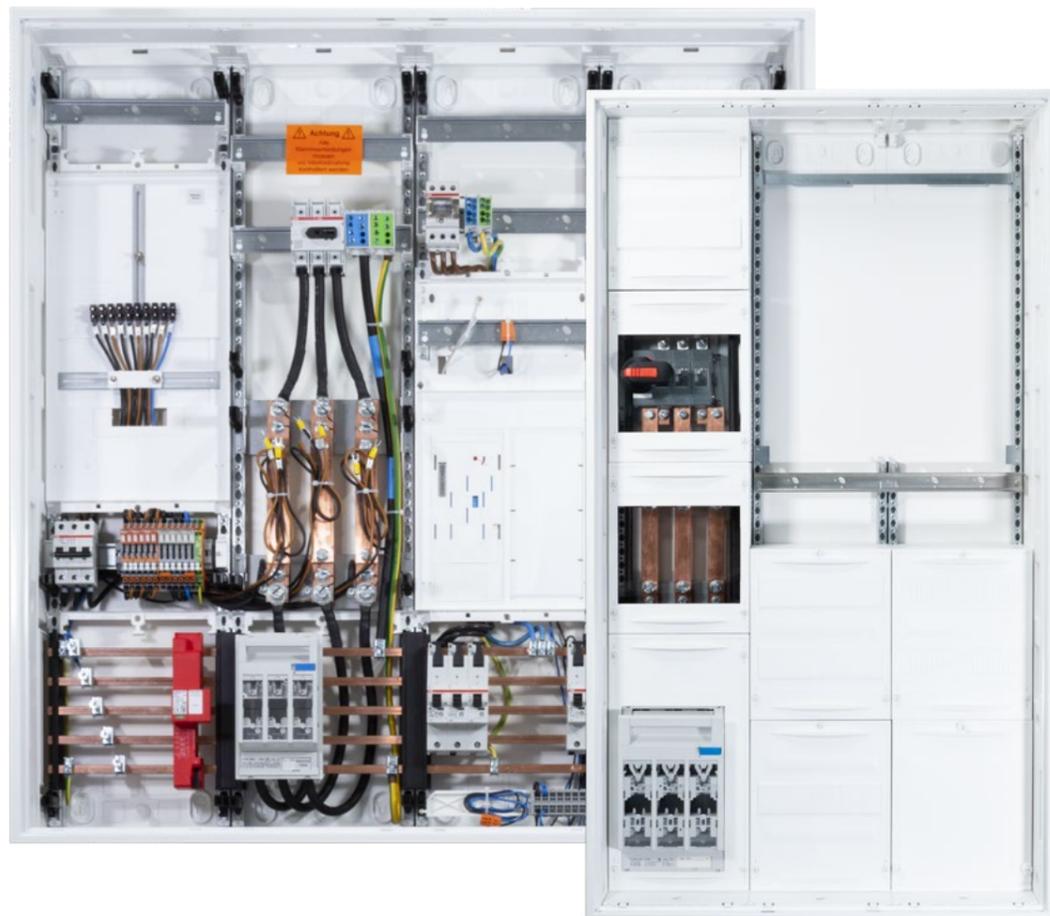

- Optimally planned meter cabinets according to your requirements
- Project-related, fully equipped and installation-ready delivery
- Incl. documentation (installation sketch)
- Fitted with high-quality brand components
- Saves you working time and effort
- Planning in accordance with the current guidelines of the energy supply companies
- Available as eHZ or 3.HZ version
- Installation heights from 1100 mm to 1400 mm possible
- - Sturdy sheet steel housing with modular installation system

For more power

Transformer cabinets for standard applications

- Complete transformer cabinets up to 100A
- Overall height 1100mm
- 2-panel with protection class II and protection type IP31/43
- Preconfigured solutions for eHZ and 3.HZ measurement
- Optimal for small to medium-sized industries, workshops or photovoltaic systems in single or multi-family homes
- Ideal solution for standard application in transformer measurement
- Prefabricated and shipped in one package
- Saves time, cost and resources

Completely customised

Transformer cabinets delivered installation-ready

- Transducer measurement individually planned, entirely according to your specifications
- Project-planned transformer cabinets up to 250A
- Manufactured according to the latest TCR of the individual network operators (TCR compliant)
- Technical documentation in the form of a layout plan
- Expansion with high-quality brand components
- Saves you time and effort
- Possible with eHZ or 3.HZ meter
- Pre-wired, installation-ready, supplied with DIN rail mounted devices

Future-proof set-up the f-tronic® Meter cabinets for wallboxes, heat pumps and PV systems

Meter connection columns

Meter connection columns Strong in safety and technology

Protection, strength and safety are also offered by our meter connection columns.

The stable housing is made of hot-pressed, glass fibre-reinforced polyester with a profiled surface. Resistant to acidic and alkaline reaction substances in the soil, Jupiter rules the weather.

f-tronic® offers a wide range of meter connection columns that sets standards. Whether pre-planned according to the connection area or completely customised - the meter connection columns in various versions and sizes protect the sensitive technical installations from lightning, thunder and rain.

Legend

Surface mounted

Products with this mark are suitable for surface mounting.

Hollow wall

Products with this mark are suitable for mounting in cavity wall constructions.

Flush mounted

Products with this mark are suitable for flush mounting.

Glow wire tested products

The glow-wire test is a test of plastic sheets or components for flammability. Here, the specimen is exposed for a defined time interval selectively to a high temperature load. In this test, the time until combustion, until its expiry, the glow wire ignition temperature (GWIT) and the glow wire flammability index (GWFI) are determined as material parameters, which are used for component evaluation. Here, the filament, pre-heated to a certain temperature, touches the test piece for a period of 30s.

CE marking

Thus, the manufacturer, distributor or EU representative in accordance with EU regulation 765/2008, declares that the product meets the applicable requirements set out in the Community harmonisation legislation providing for its affixing.

IP classification

Protection according to national and international standards DIN EN 60529/DIN VDE 0470 Part 1 and ISO 20653 denotes the Type of protection in the different IP classes.

The first digit or number/letter combination stands for the degree of protection of the housing against accidental contact. At the same time, this indicator provides information on protection against foreign objects.

Protection class II

Appliances of class II have an enhanced or double insulation between the power circuit and output voltage or metal housing and have no protective conductor connection. This protective measure is also called protective insulation (safe electrical isolation). Even if they have electrically conductive surfaces, so they are protected by reinforced insulation against contact with live parts. Portable appliances with protection class II have no safety plug; for connections, plugs are used that have no grounding; at high currents, these are shaped plugs in Germany - Plug designs that are similar to a plug. For smaller currents (up to 2.5A) so-called Euro-plugs may be used.

Halogen-free

Products with this label must not contain halogens, causing, in case of fire, no toxic and corrosive fumes.

VDE

The VDE mark documents the safety and conformity to standards of an electrotechnical product, in terms of electrical, mechanical, thermal, toxic and other hazards. It is only awarded by the VDE Testing and Certification Institute..

ÖVE

The ÖVE sign documents the safety and conformity to standards of an electrotechnical product, in terms of electrical, mechanical, thermal, toxic and other hazards. It is only awarded by the ÖVE Testing and Certification Institute.
